The SNWLNV price plan is available to low voltage customers. Metering capable of recording half hourly data is not required on this price plan

The SNWL VH price plan is available to low voltage customers. Metering capable of recording half hourly data is required on this price plan.

The capacity charge (code-CAPY) is a daily charge applied to the capacity of your connection to Smart Net's network.

The demand charge (code-DAMD) is a daily charge applied to the average of your ten highest kVA demands (twice the kVA half hourly reading) between 08:00 and 20:00 (time periods 17 to 40) on weekdays including public holidays in any one month.

The SNALVN price plan is available to low voltage business customers. Metering capable of recording half hourly data is not required on this price plan

The SNALVT price plan is available to low voltage business customers. Metering capable of recording half hourly data is required on this price plan.

The capacity charge (code -CAPY) is a daily charge applied to the capacity of your connection to Smart Net's network.

The demand charge (code -DAMD) is a daily charge applied to the average of your ten highest kVA demands (twice the kVAh half hourly reading) between 08:00 and 20:00 (time periods 17 to 40) on weekdays including public holidays in any one month.

The power factor charge (code -PWRF) is a daily charge applied where your power factor is less than 0.95 lagging. This charge is applied to the kVAh amount represented by twice the largest difference between the kVAh amount recorded in any one half-hour period and one third (to two decimal places) of the kVAh demand recorded in the same half-hour period during each month with a power factor less than 0.95 lagging. The charge is applicable to the kVAh determined between 08:00 and 20:00 (time periods 17 to 40) on weekdays including public holidays.

The SNABSU price category applies to consumers where the consumer's point of connection does not have a meter measuring consumption, has a capacity less than 1kVA and consists of fixed wired equipment with a predictable annual electricity usage. Where any of these criteria are not met, the consumer will be required to install a meter and will be placed on the appropriate metered price category.
